## The smile to go

MELBOURNE 26 April 2013

SYDNEY 31 May 2013

BRISBANE 2 August 2013

## Dr. Terry Wong

Terry initially graduated as a Science graduate (with Honours) at Melbourne University in 1981 and after two years in clinical medical research, switched over to Dentistry at Melbourne University and graduating in 1987.

He lectures both locally and internationally on topics related to composite resin application.

He presently lectures at both Melbourne University and LaTrobe University in Bendigo to undergraduate Dental students on Aesthetic and Restorative Dentistry.

Since 2004, Terry has been conducting hands-on training workshops for Dentists on the topic of Resin Bonding and is a Key Opinion leader for 3M Espe and Ivoclar Vivadent.

Presently he maintains a Private Practice primarily devoted to Restorative Dentistry in the suburb of Kew in Melbourne.

## LECTURE/WORKSHOP CONTENT

### LECTURE:

This lecture teaches the basics of adhesive and application techniques in the anterior tooth region, with special emphasis on the various indications for veneering anterior teeth with COMPONEER. Diagnostic exercises with different cases will also assist you to achieve your goals in your own practice.

2.75  
CPD HOURS

### WORKSHOP:

The practical section will be a complete anterior-tooth reconstruction with COMPONEER; under supervision you will adapt, insert and fix the enamel-shell composite to the practice model – from preparation to polishing. The workshop will end with a range of practical tips and tricks.

2  
CPD HOURS

## ADVANTAGES

COMPONEER is economical for dentist and patient with high success rate and efficiency:

- Quality dental restoration with excellent aesthetic results
- Minimally invasive removal of healthy tooth substance
- No impressions or laboratory necessary – attractive teeth after only one session
- Best options for customisation (shade selection, accentuation of shape and structure)
- High added value
- More economical than laboratory solutions
- High surface and edge quality

## THE NEW DIRECT COMPOSITE VENEERING SYSTEM

COMPONEER is a polymerised, prefabricated composite enamel shell in different sizes that combines the advantages of direct composite restoration with the advantages of laboratory fabricated veneers. COMPONEER offers a facial, anatomical shape and makes direct veneering of one or more anterior teeth easy. Time consuming shaping of the anatomical form and surface and elaborate trimming are no longer required. Specially designed new instruments and accessories make it easy to use. With COMPONEER, quality aesthetic restoration of anterior teeth can be performed efficiently in just a single session.

## PRACTICAL EXAMPLES

### Extending incisors

Slightly shortened incisal edge with moderate malposition

The tooth proportions are reconstructed and aligned with COMPONEER

### Malposition

Extensive malposition with crowding

Axially aligned correction and repositioning with COMPONEER
