

NuSmile ZR

NuSmile ZR Anterior and Posterior paediatric crowns represent the perfect balance between art and science. Made from high-grade monolithic zirconia ceramic, NuSmile ZR looks like the real thing and is 9 times stronger than natural teeth. Easy to place with tapered margins for optimal gingival fit and health, NuSmile ZR offers superior durability to last until the tooth exfoliates without needing ongoing repairs. We have optimized the translucency of our zirconia ceramic for natural aesthetics and to prevent the problem of dark show through of pulpally treated teeth – satisfying the most demanding clinicians and parents. NuSmile ZR Posterior crowns include 1st and 2nd primary molars with narrow 1st primary molars also available.

All NuSmile ZR Crowns are available in Light or Extra Light Shades

NuSmile Signature

NuSmile Signature Anterior and Posterior Crowns provide proven durable restoration for primary teeth affected by early childhood caries. Tried and true, NuSmile Signature gives a child a healthy, natural smile and are highly rated by parents and dentists in numerous studies. Our crowns are less technique sensitive than composite strip crowns and are the most widely used crown by a 2 to 1 margin with more than three million restorations over the past 20 years. In university studies, NuSmile Signature posterior crowns had a wear comparable to traditional stainless steel crowns and far exceeded competitive pre-veneered aesthetic crowns.

All NuSmile Signature Crowns are available in Light or Extra Light Shades

REGISTRATION

Register online at:

PRESENTER
Associate Professor
James Lucas

BSc, MDS, LDS, FRACDS, FICD

Associate Professor James Lucas graduated in 1975 and completed his postgraduate training in 1981 and obtained his FRACDS in 1982. He has worked in private general practice and is currently a paediatric dental specialist in private practice as well as being Deputy Director of the Dental Department of the Royal Children's Hospital of Melbourne and Clinical Associate Professor in the Department of Pediatrics', Faculty of Medicine, University of Melbourne.

Dr Lucas has been actively involved in both undergraduate and postgraduate training and has lectured and conducted workshops extensively in Australia and overseas. Dr Lucas has been an examiner at both undergraduate and postgraduate level in both Paediatric Dentistry and Special Needs Dentistry for universities and also the Royal Australian College of Dental Surgeons.

He has presented keynote lectures at international conferences on dental behavior, Restorative care, dental trauma and management of the medically compromised child. He has published articles on dental behavior, dental care of medically compromised children, teething in children and the use of dental implants in adolescents and young adults. His areas of research are growth and development, saliva, dental trauma and children with dento-facial anomalies.

Dr Lucas is a visiting consultant at the National Hospital of Odontostomatology, Ho Chi Minh City Vietnam where he is involved in the evaluation of a multidisciplinary approach to Cleft Care and also the incidence of cleft lip and palate in Southern Vietnam.

Dr Lucas is past president of the Australasian Academy of Paediatric Dentistry and also the Australian and New Zealand Society of Paediatric Dentistry.

COURSE DESCRIPTION

The use of aesthetic crowns is a relatively new technology available to pediatric dentistry for the restoration and rehabilitation of the primary dentition. This is a hands-on workshop which covers case studies, and the principals and techniques for sizing, preparation, fitting and cementation of NuSmile Signature (pre-veneered) and NuSmile ZR (zirconia) crowns. Clinical recommendations including case selection will be reviewed as well as practical tips to overcome common problems will be outlined. Controversial issues around cementation, wear and durability will be discussed as well as the emerging evidence.

At the completion of this workshop, the clinician will understand and demonstrate competence in all phases of case selection, tooth preparation, proper fitting and cementation of both pre-veneered and zirconia ceramic anterior and posterior primary crowns. Clinicians will be in a better position to decide which type of aesthetic restoration is best suited to their individual patient's needs and should feel confident to offer parents and children a new aesthetic option for full coverage restorations for anterior or posterior teeth.

PROGRAM

REGISTRATION	10.00AM
LECTURE	10.30AM - 12.00PM
LUNCH (Workshop participants only)	12.00 - 1.00PM
WORKSHOP	1.00PM - 5.00PM

All necessary equipment and materials will be available for participants to achieve the course goals.

Each workshop participant will receive a choice of 4 NuSmile crowns with the compliments of Henry Schein Halas.
