

SWISS DENTAL ACADEMY

How to revolutionise periodontal and implant maintenance for your practice

New concepts in biofilm removal, periodontal and implant maintenance.

LECTURE & HANDS-ON WORKSHOP

This lecture & hands-on workshop focuses on the latest concepts in biofilm removal, periodontal and implant maintenance. Participants will be encouraged to develop their clinical knowledge and assessment skills; learning how to identify potential problems before they occur and increase patient comfort and clinical efficiency. The hands-on workshop will build clinical know-how in using different techniques and give participants an opportunity to trial AIRFLOW® and PIEZON® 'No Pain' technologies on simulation models.

EMS 

At the end of the course, participants should have an understanding of:

- Biofilm and its effects
- Current periodontal disease classifications and calculating CAL
- Peri-mucositis and peri-implantitis
- The effects and effectiveness of hand scaling and ultrasonics
- Air polishing - indications and benefits
- Implant maintenance
- The 7 steps of Guided Biofilm Therapy
